

Identify critical changes in performance in real-time with...

...TotalAlerts

TotalAlerts empowers workers to make correct, timely and informed decisions about their business.

Monitors changes in data and reacts when certain business conditions are met. These conditions can be created by the customer to monitor a whole range of systems such as Total, 3rd party databases and even Exchange Server.

The results of a condition failure are then sent via a range delivery of methods from email to report generation and SMS in order for the relevant person to react and manage that incident immediately.

Features

- Monitor critical stock levels to manage business continuity
- Alert Financial Managers when budgets drop below acceptable levels
- Automate regular communication with your clients through SMS or mail merges
- Escalate serious breach of business conditions to directors

Benefits

- Create an action focused workplace so your business reacts faster
- Identify problems early before they escalate
- Automate reactive tasks and concentrate on a proactive strategy
- Allows critical decisions to be made with immediate effect by your staff
