

Generate real-time business information reports instantly with...

...Crystal Reports

Crystal Reports allows you to create reports using information in TotalRepairs in an almost limitless manner. From simple list based queries to graphical charts and imaging, Crystal can cover any demand from the user.

What's more, Consilium can then allow you to share that information through TotalView and the embedded Crystal Viewer.

Features

- Produce static reports showing information over a defined period as well as dynamic reports which continually update with the most current information
- Offers a multitude of reporting possibilities for the user – pull out any piece of data within **TotalRepairs** ready for manipulation
- View data from multiple systems and data sources (housing, assets) for report cross-referencing
- Generate lists based on definable criteria to mail merges or high level presentation reports for management and directors
- Remove the need to understand complex data languages for non technical users

Benefits

- Make informed decisions quickly
- User friendly reporting tool –reducing dependency on IT and developers
- Wide range of training courses available
- Highly cost effective solution
- Control your report creation through a centralised reporting team, then share that data with all your staff through Consilium's **TotalView**
