

Reduce the cost of routine processes with...

...Cyclical Maintenance

TotalRepairs Cyclical Maintenance module caters for the daily operation of routine services and contract management in areas such as Grounds Maintenance, Street Cleansing, Refuse Collection, Building Cleaning, Gas Servicing and Electrical Testing.

From the generation of the job right through to analysis of performance, TotalRepairs offers a centralised solution for the management of this service.

Cyclical Maintenance works in conjunction with TotalMobile so efficiencies can be produced from mobile working in a non-reactive environment, which traditionally have been based on paper ticket methods of working.

Features

- Consilium's diary functionality allows for the programming of work by operative or squad, period, contract or schedule
- Generate ad-hoc inspections for quality assurance and monitoring purposes
- Diary facility offers a highly visible plan of your cyclical activity
- Schedules of rates for all activity can be used to facilitate accurate job costing in the financial ledgers

Benefits

- Resource modelling can help you anticipate future requirements for materials and labour
- Reduces routine administration processes allowing staff to focus on value-added services
- Plan your resource to meet your budgets – intelligent modelling allows for the exact use of labour and materials required minimising capital expenditure
- Works with **TotalMobile** to produce further savings and increase efficiency
- Using the financial costing functionality found within our **TotalFinance** package, **Cyclical Maintenance** benefits from precise and accurate costing functionality
