

Drive Operational Efficiency with...

...TotalFinance Alerts

TotalFinance Alerts incorporates unrivalled functionality for operational alerting requirements, providing scheduled or real-time exception reporting. In addition, its extensible process modelling capabilities enable the replacement of complex manual tasks, thus driving operational efficiency throughout the enterprise and providing a common automation framework across the entire information chain.

Features

- Built around the central concepts of 'Tasks' and 'Steps' to provide the ability to build flexible processes with logical building blocks
- Complete control over which Steps are utilised and in what sequence.
- Tasks can be scheduled periodically or triggered in real-time
- Set times of the day and days of the week that Tasks may be run and times when maintenance routines will automatically be run
- Event Log provides system administrator with the facility to set a global time interval in days after which event log entries are purged
- Format Tools handles multiple formats i.e. HTML, Text and Run Crystal Report
- Output Tools include send message (SMTP), Send SMS (requires SMS Server), Send Fax (requires faxware), Save As File, Print Document, and File Transfer (FTP)
- The Decision Tool is used to control the flow of the process based on the result of one or more expressions. For example, a Task could behave differently if it is Friday as opposed to any other day of the week on which the Task runs
- The Event log provides complete accountability for all activity within TaskCentre
- Interrogation of the Event log offers details of Task processing or other system activity

Benefits

- Define business rules that partially or completely replace a manual process
- User friendly visual modelling techniques
- Ensures Tasks do not conflict with other automated processes such as backup or data warehousing routines
- Powerful Event log tool to confirm that a given Task is completed successfully or to determine the cause of an anomaly or failure
