

**Simplify passing information between corporate systems with...**

## **...TotalFinance Interfacing & Integration**

**TotalFinance Interfacing and Integration has been simplified into 4 levels of integration.**

### ***Features***

- TASKTalk provides a library of standard interfaces
- Graphical Data Mapping provides a graphical tool kit for creating data mappings between TASKTalk and 3rd party data formats. Translator supports common file formats and allows the interface designer to view and test their translation while working offline from the main application
- Bespoke Data Mapping addresses the need for specific interface requirements. (In these cases Consilium can develop a bespoke mapper containing the required logic while still using the standard TASKTalk components for import and export)
- Interactive Web Services provides sophisticated real time integration projects such as electronic service delivery or CRM. (Consilium can provide interactive Web Services which allow 3rd party applications to securely access TotalFinance information such as debtor account data across the internet)

### ***Benefits***

- Library of standard interfaces with integration to major vendors including Housing, Revenues and Benefits and Cash Receipting solutions
- Cost effective integration compared with traditional bespoke interface development
- Integration that can address simple or moderately complex transformations as well as complex bespoke interface and integration requirements
- Uses e-Gif compliant XML with configurable data validation and filtering
