

Easy access to information with...

...TotalFinance Reporting

Reporting is not just about efficient finance processes. It is also about effortless access to information. In addition to easy-to-use enquiries, standard reports provide convenient access to all the information users need to access on a day-to-day basis both for running the system or monitoring KPI's.

Features

- Print formats include .pdf, text, and xml
- Email report formats via local email editor
- Define User Defined Reports and Enquiries easily to meet user needs
- Financial Statements provide a tool for more structured reports such as outturns allowing data specific calculation to be performed within the report
- SQL Query Report Tool allows for the creation of bespoke reports based on SQL queries
- The SQL Report Wizard allows for the system administrator to schedule run times and emailing of the SQL Query Report

Benefits

- Tailor reports using the flexible report design tool
- Environmentally friendly facility to eliminate unnecessary printing
- Facility to create, schedule and email bespoke reports eliminating the need for user intervention
- Integration with Crystal Reports allows viewing within the application
- Integration of Crystal Reports allows viewing in the browser based application
- TotalView users may publish and control their reports to secured folders
- Data Access Layer for use by 3rd party reporting tools simplifies the database for users and makes data more explicit while enforcing ledger security
- Where applicable, use of industry standard Simple Mail Transfer Protocol (SMTP) for electronic mail
